

**Starter: Spend five minutes re-reading what you have written so far, making sure to edit as you read.**

## **HINTS:**

**Check your success criteria, make sure the things you need to include are used in your writing.**

**Use the spelling booklets and wordmats to 'uplevel' your writing.**

# 13.1.21

Short date in the margin where you stopped yesterday.

## Continuing your persuasive argument

Firstly, humankind is very caring to the creatures they keep as pets. We provide them with warmth, food, water and love, all things an animal or creature needs to thrive. Obviously, this would remain the same if we were to extend our care to extra-terrestrial creatures. We would make sure they had the right environment to live in, that we cultivate and grow the food that those animals need to live happily. Our hearts would be open to these amazing and incredible new creatures, it is clear that these aliens would benefit greatly from living with humans on Earth.

Challenge 1-Use a subordinate clause to add information to a sentence that wouldn't make sense on its own.

Challenge 2-Use an -ence or -ance word

Challenge 3- Use a modal verb.

## Opposing Paragraphs.

This was taken from the plan I wrote last week:

**Links:** Many people think ... may believe... I realise that... A different opinion is.. Other people believe..

**Opposing argument:** To show you understand and have thought about the opposing argument.

**Opposing Reason 1:**

Earth may not be a suitable environment for alien creatures

**Counter argument:**

We can create places where it is suitable or create ways of making Earth better for them.

## My opposing argument:

Some say that Earth is not a suitable environment for alien creatures, adding that we would be putting these creatures in danger of being injured, ill or even killed by the Earth's atmosphere. Questioning the validity of moving life from a suitable habitat to a highly unsuitable one. This may be a very well informed viewpoint, however, as intelligent and creative inhabitants of this Earth, we should trust in our scientific advancements. Obviously, if a creature was unable to live on planet Earth, we would create a variety of artificial environments where these aliens can thrive. We would not leave the aliens to abandonment and certain death.
