

Heliocentric VS Geocentric

Using the fact cards below and the information in the slides on the website, can you sort whether they are about a heliocentric or geocentric idea of our solar system.

Theorised by Ptolemy and Aristotle.

The Sun is the only celestial body to remain stationary.

Theorised by Copernicus.

Earth is the only celestial body being orbited.

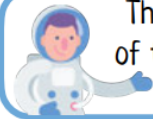

Has Earth as the centre of the solar system.

The order of the planets (from the centre of the solar system) is not similar to what we know today.

Has the Sun as the centre of the solar system.

The order of the planets (from the centre of the solar system) is fairly similar to what we know today.
