

The Phases of the Moon

Stick or draw the Moon phases into the correct positions (if that is where the Moon is – what would it look like from Earth), and write the number into the correct place to label the Moon phases.

The diagram shows a large circle representing the Moon's orbit around the Sun (on the left). The Moon's phases are arranged in a circle, with some already drawn and others as empty circles. The phases are labeled with numbers 1 through 8 in small boxes around the circle.

1	Full moon
2	New moon
3	Waxing gibbous
4	Waxing crescent
5	First quarter
6	Third quarter
7	Waning crescent
8	Waning gibbous
