

# Maths Mastery Home Learning Challenge

## Adult Guidance

### What Are We Learning?

To make simple maps to represent a journey.

### How to Set up the Challenge

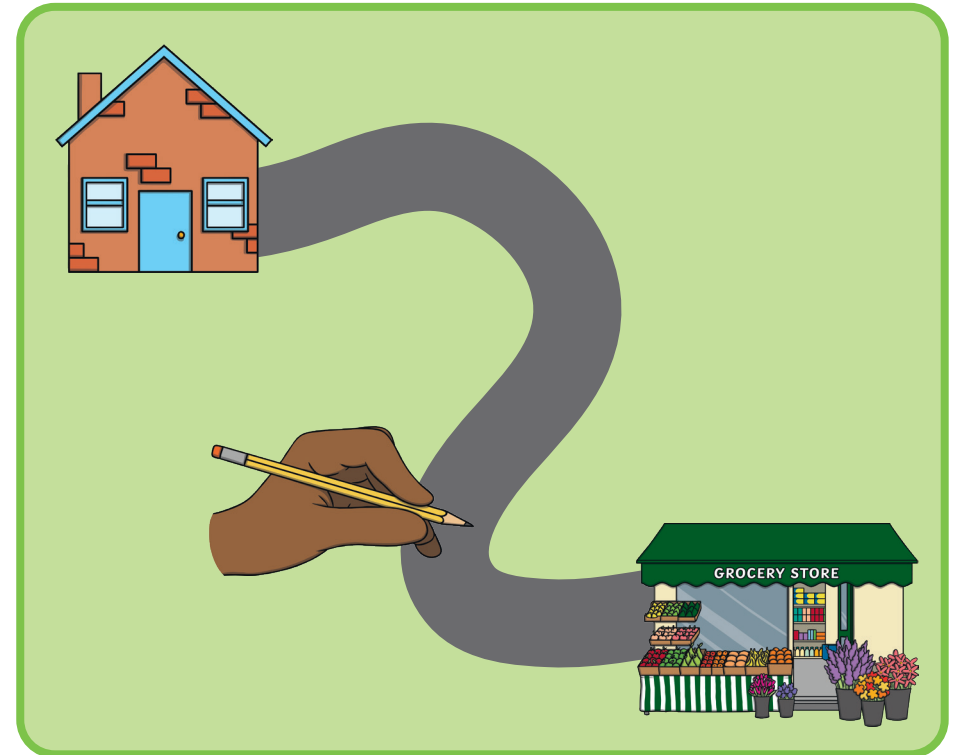

- Decide on a short walk that you and your child could make to a destination, such as to a local shop or school.
- Then, draw a very simple map, showing your home and a simple road (or a line) to your destination. Draw your destination at the end of the road.
- Walk the journey together, talking about things and places that you pass.

### How to Get Your Child Thinking

- What did we walk past? What did we see?
- What did we see first? Can you remember what we saw next?
- Can you show the things we walked past on our map?
- What was at the end of the journey? Where were we walking to?
- Can you use the map to describe the journey to me?

## My Journey

- Look at the map that shows your home and the place you are walking to.
- Walk the journey and talk about the things you pass and the things you see.
- When you get home, can you draw the things you saw on the map?
- Can you describe your journey?
